

Static IP Define

Smart Enclosure Cooler

1 Press the SET + R buttons together during 5 sec. to MENU-2

2 Find ethernet mode parameter from Menu by arrow buttons and do it OFFLINE.
(After, restart air conditioner)

3 Install and run Setup.exe on a computer that is on the same network as the air conditioners.

4 When the program is opened, the device list screen will appear and all air conditioners in the network will be listed. Find the A/C by MAC code and double click on it to access the unit.

5 The static IP field appears empty. Double click here. This process will open the 4 lines below for information entry.

6 Define Static IP, Dhcp IP, Mask and DNS.

7 Press the UP button during 5 sec. to MENU-1. Find DHCP mode parameter from Menu by arrow buttons and do it DHCP OFF.
(After, restart air conditioner)
